DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on May 9, 2006 has been entered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8, 10, 13-18, 25-27 and 29-39 are rejected under 35 U.S.C. 102(b) as being anticipated by Oehy et al. (US 5,645,606).

Oehy et al. disclose an acetabular shell or cup 5 having: a first surface, a second surface oriented toward bone; openings 12 extending from the first surface to the second surface wherein each opening 12 has an extended nonthreaded frustoconical taper section 25, a rounded section with a concave surface 25a beginning at a narrow end of the frustoconical section; each opening 12 capable of receiving any type of fastening element or insertion member; and insertion member such as a cover or “plug” 15 or a fastening element 14 with spherical undersurfaces (16a, 14a) seatable in surface 25a in a plurality of angular positions and sealing off through-hole 12 (Figs. 1-2, col. 2, lines 45-67, col. 3 and col. 4, lines 1-6).

Regarding claims 17, 26 and 30, Oehy et al. disclose that their acetabular prosthesis including an outer shell 5 and an inner shell or “liner” 6 is used as a joint

socket 2 in a hip joint prosthesis wherein a joint head 3 is fastenable in a femur by a shank part or "stem" and articulates with joint socket 2 (Fig. 2 and col. 2, lines 28-31).

The method steps of claims 27 and 29-38 are performed during use of the Oehy et al. acetabular prosthesis in a hip joint prosthesis for hip arthroplasty.

Response to Arguments

Applicant's arguments submitted under "REMARKS" in the response filed on May 9, 2006 have been considered but are not persuasive for the following reasons.

Oehy et al. disclose that openings 12 have a conically shaped inner end portion 25 and an approximately spherical support surface 25a formed between the end portion and the circumferential part 27 (col. 3, lines 3-8). Oehy et al. also disclose that the sealing part 16 of closure plug or "insertion member" 15 can be made cylindrical or conical for cooperation with support surface 25a (col. 4, lines 7-12). It is noted that sealing part 16a is locked relative to conical surface 25, i.e., fixed in position relative to surface 25, and contacts conical surface 25 as shown in marked up Figure 2 below.

It is further noted that although the above discussion is made with reference to plug 16, the same reasoning applies to fastener 14 placed in opening 12.
